National LTL Transportation

A Truckload of Cost Savings

AmeriCold manages over 4 billion pounds of freight per year, consolidating more refrigerated and frozen products than any other third-party logistics provider (3PL) in the U.S.

AmeriCold is the nation's leading temperature-controlled LTL provider, offering coast-to-coast coverage and single-source reliability for all your LTL transportation needs.

Strategic Consolidation/Distribution Centers

AmeriCold's national LTL program is designed to allow customers to ship small, less-than-truckload orders (generally less than 15,000 pounds) throughout the United States by merging them with consolidated freight in one of four AmeriCold consolidation centers.

Our centers are located in Allentown, PA; Atlanta, GA; Carthage, MO; and Clearfield, UT. AmeriCold's program allows you to have inventory in any one of these four centers, or to cross-dock within our extensive network, to ship products nationwide at competitive prices.

How AmeriCold LTL Works

Let's say you have inventory in Carthage, MO, but acquire three new accounts in Florida. You'll be provided with a shipping schedule and rate matrix indicating when and at what price your product would ship from Carthage and deliver in Florida. Each week the Carthage warehouse will pick your orders and label them with RF-scannable pallet ID tags. Your orders for Florida, along with other manufacturers' orders for Southeastern cities, will be sent to Atlanta where they will be cross-docked to merge with other freight for delivery.

Optimal Consolidation

Using state-of-the-art decision support technology, and transportation optimization tools, we move your important products to the marketplace in the most efficient method so we can:

- Lower costs and meet required service levels for each shipment
- Build profiles of all receivers into the decision support software to accommodate their daily warehouse operations
- Reduce order lead times and expedite service to our base of over 15,000 active receivers nationwide
- Control shipment frequency to minimize inventory risks
- Consistently schedule delivery of LTL volumes to your customer base
- Provide dependable transportation equipment
- Use IT capabilities to improve visibility of shipments and provide real-time information on all orders for shipment tracking, tracing, diversion, and expediting when necessary

At AmeriCold, we provide national reach within a single, highly efficient network. We optimize your delivery time and cost savings. We add superior reliability to all your temperature-controlled LTL shipments. Nowhere will you find a more dependable or experienced transportation partner.

Your inventory is in the Midwest, but you've recently developed new accounts in the Southeast. You need to get less-than-truckload (LTL) orders out to these new customers, and you need it done reliably and affordably.

So you call AmeriCold.

As the market leader in temperature-controlled LTL transportation, AmeriCold is able to leverage its national footprint and large carrier network to strategically pool LTL orders, enabling you to gain economies of scale and to improve service.

North, south, east, west — it doesn't matter. Whatever your destination, whatever the size of your load, AmeriCold can deliver.
